

# W.K.V. IMAYURU WEERAWALA

SOFTWARE ENGINEER

[imayuruweerawala@gmail.com](mailto:imayuruweerawala@gmail.com) | [linkedin.com/in/Imayuru](https://linkedin.com/in/Imayuru) | [github.com/typicalninja](https://github.com/typicalninja) | [imayuru.me](https://imayuru.me)

---

Software engineering student with hands-on backend experience building and deploying production-grade APIs, databases, and cloud infrastructure across team and independent products. Dedicated to delivering clean, performant, and reliable software.

## EXPERIENCE

**Co-Founder | Budgitin | Colombo, LK**

Nov 2025 – Present

- Architected and maintained RESTful API services and PostgreSQL database schemas in Python supporting a Flutter mobile application and Next.js web dashboard.
- Implemented authentication, authorisation, and core financial data workflows while enforcing secure coding practices and input validation.
- Provisioned and operated backend infrastructure on VPS and Cloudflare platforms, sustaining over >99% service uptime for production deployments.
- Coordinated development across a 6-member Agile team, facilitating sprint planning, task decomposition, and peer code reviews to maintain delivery cadence.

## EDUCATION

**BEng (Hons) Software Engineering | University of Westminster**

Sep 2024 – Sep 2028

**Foundation in Higher Education | Informatics Institute of Technology**

Sep 2023 – Apr 2024

- Graduated with Distinction.

## PROJECTS

**[Utrak.xyz](https://Utrak.xyz) – URL Shortening & Analytics Platform**

*Independent Product*

*Tech Stack:* Tanstack Start | React | BunJS | Cloudflare | Postgres | Redis

- Engineered and deployed a full-stack URL shortening and analytics platform used by 50+ active users and handling thousands of API requests daily.
- Introduced Redis based caching for high-frequency redirect resolution, lowering database read pressure and improving response latency during concurrent traffic.
- Identified and optimized five slow-performing database queries, using query analysis tools and indexing strategies, resulting in a 30% decrease in overall database load.

## Download GitHub Files – Open-Source Project

*Tech Stack:* React | TypeScript | GitHub API | Vite

- Produced a browser-based utility enabling developers to download individual directories from GitHub repositories, addressing a limitation in the native GitHub interface.
- Developed glob-pattern filtering and automated ZIP packaging to allow selective extraction of files from large repositories.
- Validated performance against large codebases including the Linux kernel repository (~2,100 files, 42.9 MB) to confirm reliability and scalability.

## SKILLS

### Languages

Python, JavaScript, TypeScript, Dart

### Backend

REST API Design, Authentication & Authorisation, Input Validation, Data Processing Pipelines

### Database

PostgreSQL, Redis, Query Optimisation, Indexing Strategies

### Testing

Vitest, Jest

### Frontend & Frameworks:

Next.js, TanStack Start, React, Astro, Flutter, HTML/CSS

### Infrastructure

Cloudflare Workers, VPS Deployment, Edge Routing, Linux/Unix CLI

### DevOps & Workflow:

Git, CI/CD, Agile (Scrum), Docker, CapRover, Jira, Notion

## EXTRA-CURRICULAR ACTIVITIES

### Member of IEEE and IEEE CS

*Sep 2025 – Jan 2026*
